TalentBridge AI - Agency Plan

An HR agency for small businesses, run by seven AI agents and an HR Lead (project manager).

1. What the agency does

Small businesses rarely have an HR team. TalentBridge AI handles the repeatable HR work: reading CVs, finding candidates, shortlisting, drafting job posts, planning interviews and onboarding, tracking hiring numbers and checking postings for biased wording. People stay in charge: every outreach email is drafted and held until a human approves it.

2. The team

Agent	Role	Job
CV Intake	Resume parser	Turns resume text into structured candidate records
Role Scout	Candidate sourcer	Builds boolean search strings for each open role
Shortlist & Interview	Screening	Scores candidates, assigns a stage, proposes interview slots and a scorecard
Posting Writer	Job posts and outreach	Drafts job postings and held outreach emails
Onboarding Planner	New-hire plans	Creates 30/60/90-day plans
People Analytics	Hiring metrics	Funnel numbers and the biggest bottleneck
Fairness Checker	Bias and compliance	Flags biased wording and missing pay info for human review
HR Lead	Project manager	Audits every agent, writes the ledger, sends the daily brief

3. How it works

One cycle runs the agents in order: CV Intake -> Role Scout -> Shortlist & Interview -> Posting Writer -> Onboarding Planner -> People Analytics -> Fairness Checker -> HR Lead. Each agent writes a line to a run log. The HR Lead checks that all seven ran, appends rows to the Google Sheet ledger (Timestamp, Agent Name, Task Performed, Output Status) and builds the daily brief that is emailed to the owner. A scheduled GitHub Action repeats the cycle every 3 hours and the live dashboard re-reads the results every 30 seconds.

4. Controls and honesty

- Human approval: outreach is held, nothing is sent to candidates.
- Fairness check: the legacy posting with "young rockstar ... native speaker" is flagged by the checker (7 issues in the first run).
- Test suite: 24 automated checks pass (agent self-tests, full cycle, bias detection, held outreach).
- The agents are custom rule-based code written for this project, not kits from markfulton/ai-employees (it has no HR kit). All candidates are synthetic sample data.
